EDUCATION

B.Tech, Computer Science & Engineering (AI & ML) – VIT Bhopal University 2023 – 2027
CGPA 8.39 / 10 • No active backlogs • Coursework: Machine Learning, Deep Learning, Computer Vision, NLP, Cloud Computing

Class XII (CBSE) 86.4% • Class X (CBSE) 94.6% – DAV Public School, Bistupur 2021 – 2023

TECHNICAL SKILLS

Languages	Python, SQL, Node.js, C++
Generative AI	RAG, Claude Code
Backend & APIs	Docker, FastAPI
Data & Storage	PostgreSQL, Supabase
ML & Vision	PyTorch, OpenCV, CNNs
Tooling	Git, CI/CD, PyTest

WORK EXPERIENCE

Software Developer Intern – ConsultiFI Data (Remote) Jun 2026 – Present

- Ship features into a production Django service, REST endpoints (DRF), ORM models and migrations for device and trip data, and scheduled jobs, inside an established codebase alongside the platform team.
- Build Python ingestion pipelines for IoT oil flow-meter telemetry, with validation that flags abnormal flow, sensor drift, and missing-data windows before the numbers reach reporting.
- Aggregate fleet telemetry (GPS, fuel draw, run-hours) into consumption, utilisation, and route-level metrics surfaced through operations dashboards.

AI Intern – Tata Steel Utilities & Infrastructure Services Ltd, Jamshedpur (On-site) May – Jun 2025

- Deployed a computer-vision system (Python, OpenCV) across 4 live CCTV feeds at an active industrial facility, with automated real-time alerting.
- Owned frame extraction, data preparation, detection tuning, and evaluation: 92% accuracy on 1,000+ vehicle detections/day in production, cutting manual monitoring workload by ~60%.

PROJECTS

Praxya – LLM Document Intelligence for GHG Reporting Mar 2026 – Present
github.com/Rituraj6047/Praxya

- Document-intelligence service that turns unstructured corporate filings into SEBI BRSR / IPCC Scope 1 and 2 emission reports.
- Pipeline: PDF → OCR → LLM extraction via tool use → Pydantic validation → calculation → auditor-ready report. Python, FastAPI, PostgreSQL, Docker; Llama 3.3 70B on Groq.
- Multi-tenant schema with row-level security, insert-only audit trail, and retry and fallback handling around each model call, so every reported figure traces back to its source document.

Conversion Funnel Analyzer – Agentic Pipeline with Guardrails May 2026
github.com/Rituraj6047/conversion-funnel-analyzer

- Three-stage agent pipeline (map → analyze → recommend) returning schema-validated, prioritized recommendations, behind a cross-validation layer that strips hallucinated output and enforces domain invariants before users see results.

FileMyCa – GST Data-Collection Portal for CA Firms Feb – Mar 2026
github.com/Rituraj6047/FilemyCA

- B2B portal for CA firms to collect monthly GST data from their MSME clients: an admin dashboard tracking 47 clients, upload validation on every submission, and automated bulk reminders. Built with Next.js, TypeScript, and Supabase.

HOBBIES

Football • Chess • Badminton • Reading
